

Andrés García

Senior SRE / Platform Engineer

Guadalajara, Mexico (UTC-6) · remote · jose.andres.gm29@gmail.com · jandres.me · linkedin.com/in/andres-garcia-sre · github.com/andresgarcia29

SUMMARY

Site Reliability and Platform Engineer with 9+ years building and running infrastructure where downtime is very visible: live sports streaming with peaks of 20–30M concurrent users across three continents, a banking core kept at 99.99% through a fintech-to-regulated-bank transition, and cloud platforms built from scratch. Deep in AWS and GCP, Kubernetes, Terraform, GitOps and observability. Open to remote roles, full-time or contract.

EXPERIENCE

Senior Site Reliability Engineer · NBCUniversal (Peacock) · Remote Nov 2022 – Present

- Lead infrastructure for Peacock's live sports events (e.g. NFL), handling traffic peaks of 20–30M concurrent users.
- Design and run multi-region deployments across Europe, Africa and the Americas, optimizing latency and replication.
- Architected the network and security layers that integrate AWS and GCP for secure, high-speed data replication.
- Run the observability stack (Prometheus, Thanos, Loki, Grafana) that product teams rely on during live events.

DevOps Lead · Covalto · Remote Nov 2021 – Nov 2022

- Led the technical migration during the acquisition of Banco Finterra, taking a fintech to a fully regulated national bank.
- Designed the architecture and documentation to meet CNBV banking security and data sovereignty standards.
- Standardized deployments with GitOps and built health checkers in Go and Python, keeping critical banking cores at 99.99% availability.

Senior DevOps Engineer · GoExpedi · Houston, TX (remote) Aug 2020 – Nov 2021

- Built the cloud platform from scratch: from basic Docker deployments to a multi-account AWS strategy managed with Terraform.
- Secured B2B e-commerce platforms for global enterprise clients.
- Broke legacy monoliths into microservices and established a high-performance CI/CD culture.

DevOps Engineer · Rever · San Francisco, CA (remote) Dec 2018 – Aug 2020

- Built the company's Data Warehouse and Data Lake from scratch, enabling real-time analytics.
- Implemented GDPR standards for data privacy and security.
- Helped scale engineering from 2 to 30+ engineers while keeping DevOps best practices.

Earlier roles 2016 – 2018

Data Scientist at Digitt · Back-end Developer at Agave Lab · Machine Learning Developer at Tecnológico de Monterrey · Full Stack Developer at Kukumi and MAXCOOL.

SELECTED WORK

- **Company-wide AI gateway and MCP rollout:** governed access to LLMs with per-team cost tracking and rate limits, plus MCP servers so assistants reach internal tools securely.
- **ark-cli** (Go, open source): one AWS SSO login puts every EKS cluster across all accounts and regions into kubeconfig in seconds.
- **harness-creator / harness-daemon / harness-ui** (open source): an agentic engineering harness for multi-repo workspaces, a Go daemon that observes coding agents live across machines, and its React dashboard.

SKILLS

Cloud	AWS (multi-account, landing zones, IAM), GCP
Kubernetes & delivery	EKS, GKE, ArgoCD, Kargo, Helm, GitOps, GitHub Actions, GitLab CI
Infrastructure as code	Terraform, OpenTofu, Terragrunt, Pulumi
Observability	Prometheus, Thanos, Loki, Grafana, OpenTelemetry, ELK
Security & compliance	HashiCorp Vault, CNBV, SOC 2, GDPR
Languages	Go, Python, Bash, TypeScript · English (full professional), Spanish (native)

EDUCATION

B.S. Computer Engineering, Universidad de Guadalajara · Research Assistant (ML & sentiment analysis), Tecnológico de Monterrey / UC Berkeley
